Bandung, February 27, 2019

To:
Editor-in-Chief of Majalah Kedokteran Bandung (MKB)
in Bandung, Indonesia

Dear Sir/Madam,

We wish to submit an original research article entitled “The Correlation Between Neutrophil-lymphocyte Count Ratio and Procalcitonin in Septic and Septic Shock Patient” for consideration by Majalah Kedokteran Bandung.

We confirm that this work is original and that the manuscript has not been published elsewhere, nor is it currently under consideration for publication elsewhere. We also confirm that there is no falsification or fabrication of data and no plagiarized content in the article.

We believe that this manuscript is appropriate for publication by Majalah Kedokteran Bandung because Sepsis is one of the leading causes of death in patients with infection. Procalcitonin is one of the laboratory parameters that is used to differ systemic inflammatory responses due to pathogens or non-pathogens. Neutrophil-lymphocyte count ratio (NLCR) is one of the simple laboratory parameters. The purpose of this study was to investigate the correlation between NLCR and procalcitonin for sepsis and septic shock patients. All authors of this manuscript have approved the final version of this submitted manuscript.

We have no conflicts of interest to disclose.

Thank you for your consideration of this manuscript.

Sincerely,

Jonathan
Conflict of Interest Declaration

Here by the authors certify that the manuscript entitled:

The Correlation Between Neutrophil-lymphocyte Count Ratio and Procalcitonin in Septic and Septic Shock Patient

is an original work and is not under review at any other publication. All authors of this manuscript have approved the final version of this submitted manuscript and there is no financial interest to report. This manuscript is ready for publication in the Majalah Kedokteran Bandung (MKB).
