AUTHOR GUIDELINES

Majalah Kedokteran Bandung (MKB) is a peer-reviewed quarterly scientific publication journal that accepts original research articles relevant to the field of health, basic medical science, and applied medical science.

Research Articles

Research articles are original research articles in basic and applied medical sciences as well as in health. The format of a research article consists of title page, abstract (English and Indonesian), introduction, methods, results, discussion, and references.

Case Report

Case reports are articles on cases in the field of medical and health sciences that are considered to be important and needs to be disseminated. The case report format consists of title, abstract (English and Indonesian), introduction, case, discussion, and references.

Instructions for Manuscript Submission

All manuscripts to be published in MKB should be submitted through our website at <http://journal.fk.unpad.ac.id/index.php/mkb>. Authors are required to register before submitting their manuscript. For further information regarding the submission process, please send contact our secretariat at mkb.fkunpad@gmail.com.

General Instructions

To avoid duplication, MKB does not accept articles that have been published or are being submitted to other journals, which should be proven by signing a statement that the manuscript is not being submitted or processed in another journal. The author should ensure that all other authors have agreed to publish in MKB. If an article that has been published in MKB is known to be published in another journal, MKB will announce its retraction in the next issue of the journal. All articles will be discussed by experts from appropriate fields (peer review) and also by the editorial board. Articles that need improvement are returned to the author. Research articles must obtain the approval from an ethics committee or consider the ethical aspects of the research that can be accounted for.

Article Writing

Manuscript to be submitted should be a typewritten manuscript using Times New Roman Size 12 font on A4 paper double-spaced throughout with 4 cm margins at the left and the top and 3 cm at the right and the bottom. Your manuscript should not comprise more than 20 pages. The total number of words in Introduction, Methods, Results, and Discussion should not be more than 3,500 words. All page should be numbered sequentially starting from the title page to the last page. Articles will be published in US English.

Title page

The title page contains the title of the article, the author's name with the full title, the author's affiliate institution, name and correspondence address, phone number, facsimile number, and e-mail address. The title of the article should be brief and clear. English title should not be more than 140 characters and Indonesian title should not be more than 14 words or 200 characters.

Abstracts and Keywords

Abstracts for each article are written in English and Indonesian using an unstructured abstract form with a maximum of 250 words for English and 200 words for Indonesian. Abstract is written concisely and clearly

according to the introduction, methods, results and discussion (IMRAD) format. Three to five key words should be selected and written down in an alphabetical order to help indexing.

Introduction

The Introduction describes the problem in general terms (including relevant facts/figures to establish the significance of the problem). At the end of the introduction was written the purpose of the study.

Methods

Methods contains the material under study and the way described briefly by the order of operation as well as the location and time of the study. Explain statistical methods in detail. Sampling method used is described (including the sample size). Consideration of ethical issues is included. If the protocol has been approved then the ethical clearance/approval letter number and the health research ethics committee must be written.

Results

The result is the core of scientific writing. This section presents data and information that will be used as the basis of the conclusion and even expected to get a new theory. In results, listed the tables and or images, graphics, photos to explain and abbreviate the description should be given; numbered according to their appearance in the text. Tables/figures in the results are important and relevant with the results. The text does not repeat the results in the tables/figures.

Discussion

Discussion of the article reveals, explains, and discusses the results of the study with an analysis by the research design, interpretation, and explanation of its synthesis. Also, the results obtained are compared with the results of previous research of others. Discussion contains information, whether the results answer the proposed hypotheses/objectives of the study not a repetition of the results. Include the conclusion in to discussion section. The conclusion is the key result, the most important outcome of your work. Do not simply summarize the points already made in the body-instead, interpret the findings at a higher level of abstraction. Make the conclusion interesting and memorable for readers.

Tables

Tables should be typed in double spacing and numbered in Arabic numeral system in the order of their first citation in the text. Tables are included in the text and also on separated pages. Each table should include a brief title. Tables should be Notes on annotations and abbreviations should be included in the table description using footnotes *, **, # below the table. Do not use vertical lines between columns. Use horizontal lines above and below the column heading and at the bottom of the table only. The maximum number of tables is six.

Photos/Pictures/Charts

Personal and identifiable photos must be accompanied written permission. Any published images should be referenced. Photos/pictures should be numbered according to their appearance in the text. The number of tables and photos/pictures should not be more than six. As best quality of images are required for publication, the images can be separately uploaded in image format (JPEG, TIFF, or EPS) to the supplementary files. Minimum resolution for all figures in the following [color in RGB

(red, green, blue mode) or gray-scale] at least 300 dpi (dots per inch). The recommended resolution for line art (charts or images that contain typographic elements) is 600 dpi. For x-ray films, scans, and other diagnostic images, as well as pictures of pathology specimens or photomicrographs, black-and-white or color photographic prints, is 5×7 inches (127 × 178 mm).

Statistical Method

Statistical method/s used should be explained in detailed in Method section. Define statistical terms, abbreviations, and most symbols. Specify the computer software used.

Acknowledgment

Acknowledgments should be limited to appropriate professionals who contributed to the paper, including technical help and financial or material support.

References

References are written in Vancouver style and numbered according to their appearance of the articles, not alphabetically. The maximum number of authors to be included in the reference is six. If there are more than 6 authors involved in the article, write the name of the first 6 authors followed by et al. The maximum number of references in one manuscript is 20 references published in the last 10 years. Eighty percent of the references should be journal articles with the remaining 20% consists of textbooks. Reference to articles that have been accepted but still waiting for publication in a journal should be written as "in press". Authors is recommended to use reference management software, in writing the citations and references such as: EndNote®, Mendeley®, or Zotero®.

Examples of how to create the reference section
